

WOODLAND MANAGEMENT PLAN

NOTE: This plan applies only to the extent of woodland within the application site and therefore under the control of the developer.

Schedule of works to Woodland W1

Prior to construction phase, remove all Ash trees from the woodland ensuring that all waste is disposed of in accordance with current guidelines on biosecurity in order to minimise the spread of Ash dieback disease (*Hymenoscyphus fraxineus*) as far as is practicable.

Carry out pruning to retained Oak trees to remove loose / unstable deadwood only. Crown lift trees to 3m above ground level over the proposed cycleway and adjacent open spaces.

The Oak tree damaged by the failed Ash tree has also suffered damage. For this tree, remove loose deadwood, broken branches and prune to reduce the canopy to sound points, balancing the crown as far as reasonably practicable.

Maintain retained hedges by annual clipping to retain current form.

Carry out planting as per the approved landscape planting plan and maintain in accordance with the plan.

Carry out annual inspections in accordance with an approved maintenance plan. Assess tree health / condition and action pruning works as necessary in the interests of tree health and public safety.

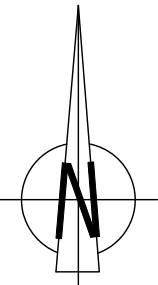

Any works to protected trees must receive the prior written consent of the local planning authority.

All works to trees must be carried out to a minimum of the standards contained within BS3998: 2010 *Tree work - Recommendations* by an appropriately qualified and insured contractor.

DO NOT SCALE
ALL COORDINATES RELATED TO LOCAL GRID LOCATED TO OS NG BY BEST FIT TO DETAIL, EXTRACTED FROM OS DIGITAL DATA.
